Introduction

Highlighting the achievements of 38 potters and sculptors from around the world, *Masters: Earthenware* offers a glimpse of the tremendous range of imagination, innovation, and technical facility that characterizes contemporary use of the oldest ceramic medium. As the many outstanding examples in this book illustrate, earthenware is distinctive not only for its intrinsic properties as a clay body and the vocabulary of forms that can be readily adapted to it, but also for the broad spectrum of decorative strategies—from appliqué, incising, stamping, and modeling to painting, sponging, and glazing—that can be employed to embellish its surfaces. As a plastic material of widely diverse possibilities, earthenware is clearly second to none; as a ground for color, texture, and applied ornament, it is unparalleled among art media.

Matthias Ostermann, a master of earthenware in his own right, selected the artists for this volume. Taking care to assemble a balanced survey of sculptures and vessels, he has included highly decorative and relatively unadorned objects, forms that pay obvious homage to the past, and pieces that seem determined to sever all ties with it. The works on the following pages span the scale of emotions, ranging from whimsy to solemnity.

Many works are small and intricately designed, while others are monumental—even colossal—in scale. There are objects of captivating beauty, and pieces that were clearly created to needle the viewer's conscience and antagonize certain sensibilities. Although some omissions will be noted—performance art and work with unfired earthenware clay, for example—the pieces collected here represent the established categories of exploration in this unique medium.

Paragons from history clearly influence artists who work with earthenware and employ its distinctive decorative techniques—practices that have developed over the course of many centuries. With its medieval roots in the Islamic emulation of Yuan- and Ming-Dynasty porcelains and the later European adaptation of those Middle Eastern innovations, the majolica tradition is perpetuated in the painted vessels of numerous contemporary ceramists. Marino Moretti, Alexandra Copeland, and Terry Siebert draw inspiration from motifs found on various historical wares, from Italian Renaissance pitchers and chargers to eighteenth-century English botanical dishes. Other artists freely invent their patterns and imagery as well as ways of applying them. Consequently, style is an evolving aspect of contemporary majolica, embracing in its scope everything

from the contemplative precision of Connie Kiener's painted plates to the extemporaneous fluidity of Linda Arbuckle's embellished vessels.

Earthenware's rich history of pattern and form can be observed in the work of many artists. Diego Romero creates intriguing updates of Mimbres bowls, while Christine Thacker produces pieces that bring to mind medieval Rhenish vessels. Stephen Bowers modernizes the classic Staffordshire willow pattern with his eccentric, Australianized plates, and Richard Slee nods to the bright colors and machined contours of nineteenth-century English industrial wares in his bold, glossy sculptural

objects. A number of earthenware artists explore the idea of ceramics history in their work, foremost among them Richard Milette, whose brilliant sculptural references to conventional ceramic forms probe the conceptual nature of "ceramicness" without succumbing entirely to the seductive properties of the forms themselves.

On the opposite end of the spectrum is the work of several ceramists, including Lisa Naples, Woody Hughes, Wynne Wilbur, and Gail Kendall, who explore the conceptual aspects of historical ceramics by making fully functional pieces. Through the work of these artists, history maintains tangible, experiential links with

▲ Gudrun Klix
Lichen Gully | 2007

the present. Kendall, for example, imagines ancestral ties to European village potters as she creates pieces that combine pronounced ornamentation with simple serviceability. Her vessels have a sturdy elegance that's intended to enhance the domestic environment. Vessels created for this kind of existence may share attributes with non-functional pieces, but they make a point of physically engaging their immediate contexts in ways that independent art objects don't.

There is, of course, a value to independence in the realm of sculpture, and a number of the artists in *Masters: Earthenware* invoke it. Herman Muys' provocative reflections on vice and human frailty don't commit to specific interpretations but leave the possibilities for contemplation open to viewers. The powerful bas-relief sculptures of Paul Day function in similar fashion, suggesting certain narratives but slipping adroitly through every loop that threatens to close too tightly around them and confine them to pedagogy or propaganda. Day's works never relinquish their complexity in order to hammer home messages. Neither do the sculptures of Patti Warashina, who employs a mixture of humor and empathy to achieve a complex activist art. Warashina's pieces have a contemplative quality that sets them apart from the shrill, sloganized works the activist genre often produces.

Some of the most thought-provoking contemporary work in earthenware takes as its subject the varied possibilities for perceiving internal and external space in relation to the ceramic vessel. Examples in this volume include the creations of Greg Payce, whose linear arrangements of monumental vases reverse the ordinary relationship of figure and ground to conjure human profiles—not from the material elements of his compositions but from the intervening emptiness defined by them. Cindy

◀ **Woody Hughes**
Inlay Jar | 2008

Kolodziejski's illusionistic-mirror works convey an impression of interior infinitude—a space represented on the continuous external walls of her vessels that potentially recedes ever inward.

▲ Diego Romero
Return to the Mothership | 2007

This type of unprecedented experimentation with spatial properties, both real and illusionary, suggests that—despite its long history—the earthenware vessel may contain other intriguing possibilities yet to be discovered. Whether employed in pursuit of such as-yet untapped potential or oriented toward the precedents of the past, the distinctive styles of the ceramists whose work is represented on the following pages reflect the tremendous variation that characterizes the earthenware medium today.

As a product of Matthias Ostermann's unique perspective, *Masters: Earthenware* is naturally focused and does not aspire to serve as a comprehensive survey of the field. The works that appear here are wonderfully diverse, yet there are underlying lines of cohesiveness between them, and I invite you to contemplate, as I did in preparing the following essays, not only the captivating objects themselves but also the guiding vision that brought them together in the context of this book.

— Glen R. Brown, Ph.D., Kansas State University

HEINEMANN

Steven Heinemann

ELEGANT IN THE MANNER OF MATHEMATICAL EQUATIONS that reduce complex sets of conditions to pure, simple symmetry, the works of Steven Heinemann are the products of a probing intellect and an inclination toward quiet revelation about the essences of things. Containment as a concept is the point of departure for his investigations of form and space, and the vessel is the object on which he concentrates.

While they refer at times to traditional pottery, Heinemann's bowls also point to a zone of abstraction. His vessels carry allusions to use and purpose, and their interiors bear traces of activity, from the ritualistic to the geological. Heinemann's vessels come in an abundance of shapes, from ladles to shoe-like enclosures to asymmetrical biomorphic shells that seem as flexible as leathery crocodile eggs. His delicate craquelure textures—dry like lakebeds desiccated in a desert heat—and subtle patterns of spots are the perfect complements to his fragile container forms.

Based in Canada, Heinemann has taught and exhibited around the world. His work is in the collections of the Museum of Fine Arts in Boston, Massachusetts; the Victoria and Albert Museum in London, England; and the World Ceramic Center in Icheon, South Korea.

“As an organic material with a long history of human use, clay offers an engagement with both the natural and cultural worlds, with both historical and geological time.”

DAY

Paul Day

IN HIS EPIC EARTHENWARE RELIEFS, British sculptor Paul Day mines the past for lessons in the sublime. His influences—and what he takes from them—are remarkably varied. Borrowing a sense of grandeur from classical entablatures, a feeling of paranoia from Giovanni Battista Piranesi's menacing, monumental prison etchings, and strains of intimate immensity from Lorenzo Ghiberti's *Gates of Paradise*, Day synthesizes a variety of elements in masterful high-relief sculptures that are very much his own.

Day is inspired by architectural spaces—by contemporary urban areas and the faces of the people who inhabit them. Forming dramatic narratives from the shifting panorama of the modern cityscape, he makes the familiar strange in his work, confronting viewers with images of human hives that teem with activity. Anonymous and alien, his expertly wrought men and women are players in an endless tragicomedy. Yet there is beauty in Day's vision, as well as an uncanny syncopation with the fluctuating pulse of modern life.

Day, who lives in France, has created commissioned pieces for the Royal Galleries of Saint-Hubert in Brussels, Belgium, and the Victoria Embankment in London, England. He exhibits regularly in Europe.

FLØCHE

Anne Fløche

LIKE ARTIFACTS WITH AN AURA OF HISTORY ABOUT THEM, the works of Danish ceramist Anne Fløche have an austere elegance that recalls ancient Greek and Roman frescos. Fløche achieves this effect in part through the use of terra sigillata to produce surfaces that can appear to be dry and chalky. Preferring this result to the fresh-looking finishes she might achieve with glaze, Fløche uses color to give her pieces a faded, aged quality.

Hand-built from coarse clay, her boxes and panels possess a quiet, underlying strength. Their textures often resemble rough wood that's been softened by countless cycles of painting, peeling, and repainting. The tremulous lines of Fløche's sgraffito drawings, while reminiscent of casual scratches with a penknife, are charged with expression. Fløche strives for purity of design and does not impose meaning on her pieces, so that viewers can establish their own interpretations. This open-endedness adds a layer of mystery to her work, as her pieces quietly radiate ties to antiquity. Fløche has participated in exhibitions around the world, and her work is in collections throughout Europe and the United States.

PAYCE

Greg Payce

SUGGESTIVE OF ALBARELLI—medieval apothecary jars—aligned shoulder to shoulder on a shelf, their concave profiles bracketing empty space and generating a horizontal rhythm of positive and negative, the vessel groups created by Greg Payce exploit the contrast between intangible silhouette and full-bodied form. Colossal in scale, his stalwart upright pieces might by themselves conjure the impression of human presence, even before viewers notice the ghostly figures inhabiting the interstices between them.

Payce skillfully plays with his literal representations and the uncanny shifting between presence and absence that they produce. As the viewer's gaze oscillates between his vessel forms and the images created by the negative space between them, an illusion of movement is created that references time-based art media such as animation and music. Payce's individual works dispense with all obvious imagery and still present a convincing case for his assertion that "vessels are abstractions of human form."

Payce is on the faculty of the Alberta College of Art and Design in Calgary, Canada. His work is featured in museums and galleries around the world, including the Royal Ontario Museum in Toronto, Canada, and the China Ceramic Institute in Jingdezhen, China.

KLIX

Gudrun Klix

STRETCHES OF PARCHED DESERT FLOOR SHIVERED into spiderwebs of crackles after a sprinkling of rain; hard, undulating fields of rope lava; the ragged edges of dry leaves scattered on iron-red earth—the formal allusions of Gudrun Klix’s sculptures reflect her profound sensitivity to geological and biological nature, particularly as they exist in Australia, her homeland. Her work represents an exploration of that country, the fragility and beauty of which she channels in her delicate, earthy pieces.

In elements evocative of broken feldspar outcroppings, brittle twigs, and bleached bones, Klix hints figuratively at the long history of human presence inscribed on the Australian land. Through the use of terra cotta, she is able to convey a potent sense of the continent’s desert landscape. Klix’s pieces are also inspired by a sense of discovery, and they represent her ongoing search for new shapes, surfaces, and relationships. Her inquiries into the connections between form, content, space, and texture have resulted in large installations as well as intimate sculpted pieces.

Klix is an honorary senior lecturer at the University of Sydney, where she served as head of the ceramics department for 20 years. Her work is held in public and private collections around the world.

“ I’m interested in how finger or tool marks on the inside of a form interact with the marks on the outside. These marks usually come together at the rim of a form, where the inside and outside meet, and they can determine the shape and profile of the piece, just as the topographic shape of a mountain determines its profile against the horizon.”

BOWERS

Stephen Bowers

THE FAMILIAR BLUE-AND-WHITE MOTIFS OF the Chinese-inspired Staffordshire willow pattern dissolve under the brush of Stephen Bowers and reconvene to form exquisitely fluid, collage-like compositions. Bowers' meticulously conceived kangaroo- and cockatoo-populated designs reflect on the history, mythology, and nationalism of his native country, Australia. In his pursuit of a hauntingly beautiful decorative illustration style, Bowers—a self-taught artist—employs the techniques of sponging, rag rolling, stenciling, and airbrushing. The result is compositions that breathe the air of fairy-tale worlds.

In making new works from the conventional willow pattern, Bowers uses images from local suburbia and vernacular culture, often replacing the traditional pagodas and temples of old willow pieces with corrugated iron water tanks and brick veneer bungalows. Much of his work is polychrome, highlighted with rich gold. Bowers aims for a suggestive mix of images in his work in order to arouse various interpretations and responses in viewers. A blend of Byzantine craftsman, art-nouveau illustrator, and cubist collagist, he carries the past into the present with singular sensitivity, imagination, and technical expertise. Bowers' work is held in collections around the world, including the Museum of International Ceramic Art in Grimmerhus, Denmark, and the National Museum of History in Taipei, Taiwan.

Cindy Kolodziejski

MIMICKING THE REFLECTIVE PROPERTIES OF POLISHED surfaces, the slickly painted walls of Cindy Kolodziejski's early vessels generate the effects of inwardly oriented panoramas—as if the infinitude of exterior space were suddenly sucked wholesale into 360-degree interiority. The potential for such spatial inversion is the primary advantage that the continuous vessel wall enjoys over the flat, delimited plane of the canvas. Kolodziejski is nearly unrivaled in her ability to exploit this potential by means of a meticulous and uncompromising brush.

In Kolodziejski's most recent works, the spatial tables have turned, so to speak, and the visceral contents of finite interiors—lungs, brain, vascular systems—press outwardly against vessel walls like balloons expanding in glass vacuum tubes. To Kolodziejski, surface seems only a concept to be illusionistically overrun. An artist who has carved out her own creative niche, Kolodziejski works in a medium that exists somewhere between painting, ceramics, and sculpture, with its end goal being a kind of conceptual drama. Her work is featured in galleries around the world, including the National Museum of History in Taipei, Taiwan, and the Los Angeles County Art Museum. She lives in California.

SELVIN

Nancy Selvin

SPARE AND LOOSELY STRUCTURED, THE BOTTLE FORMS created by Nancy Selvin recall canning jars arranged in glinting rows in the dim light of a pantry, or worn tools arrayed on the walls of a workshop. Selvin, who grew up in southern California in the 1950s, draws inspiration from the American West and from the old perfume bottles she excavated in empty lots as a girl. She works with a subtle, understated aesthetic to create pieces that have a sense of lyricism and a quiet nobility.

While Selvin's bottles inevitably evoke associations with the human form, they are just as important as vehicles of reflection on the long history of utilitarian objects fashioned in clay. Aligned in the airless space of memory like silent processions of witnesses to a distant past, her earthenware pieces evoke the pathos of aging through suggestions of cloudy rust stains, the grime of use, and the fading of color into a ghostly pallor. Her work hints at the familiar—bowls on a countertop, bottles on a ledge—and reexamines the spaces we inhabit. Selvin's work is in numerous public and private collections, including the Smithsonian American Art Museum in Washington, D.C., and the Los Angeles County Museum of Art.

KIENER

Connie Kiener

WEDDING PRECISE DETAILS TO LARGER FLOWS OF ENERGY IN THE majolica paintings she executes on plates, pots, and portrait busts, Connie Kiener plays the role of moderator as well as artist during the creative process. Kiener, who lives in Oregon, makes masterful connections in her work, synthesizing themes of nature, mortality, and feminism to produce pieces that are fresh and surprising. By linking the peeling of an orange to the rotation of a planet or the slow swish of a fish's fin to the soft falling of a feather, Kiener is able to comment in a very specific way on the universality of the laws of motion.

Majolica is central to Kiener's aesthetic. As a medium, it offers her a substantial amount of control over surface decoration, helping to facilitate the provocative imagery that characterizes so many of her pieces. Ribbons unfurling in calligraphic spirals and the blackness of the infinite night sky are Kiener's favored metaphors for limitless possibility, and the perfect coalescence of forms in her work hints at a harmony that can only exist on the grand, impersonal scale of the universe.

Kiener's work is in collections at the Smithsonian American Art Museum and the White House in Washington, D.C.

RUSSELL
BILES

Russell Biles

APPROPRIATING THE VISUAL CHARACTERISTICS of Latin American santos figures, gift-shop souvenirs, and the cheap plastic toys that come with fast-food kids' meals, Russell Biles creates narrative sculptures that befuddle our ordinary perceptions of iconic forms. Injected with a corrosive dose of satire, his works are rich with allusions to popular culture and often tackle polarizing topics such as religion and politics.

Through his work, Biles creates a symbolic world that reflects in its merciless light the clash of opinions that exists in this one. In one piece, children are bound to a merry-go-round indoctrination into the seven deadly sins. In another, the newly rich bumpkins of the television comedy *The Beverly Hillbillies* reflect with dour resolve on the Iraq War. All of these figures seem the victims of inescapable forces that both act upon them and compel them in turn to act as they do. Biles' hand-built figures and the tableaux they compose reveal his appreciation for old-fashioned craftsmanship and his talent for creating provocative visual narratives.

A South Carolinian, Biles has exhibited internationally. His work is in the permanent collections of the Museum of Arts and Design in New York City and the Mint Museum in Charlotte, North Carolina.

BEAN

Bennett Bean

THE MATERIAL BOUNDARIES THAT SEPARATE A PAINTING, a sculpture, and a ceramic vessel seem irrelevant to Bennett Bean, whose pieces—nonfunctional vessels and sculptural objects distinguished by a fluid, asymmetrically rhythmic flow of color, line, and plane—pass with breathtaking ease between categories. In Bean's work, geometric abstraction meets biomorphism in a process that—like the confluence of two streams into a single current—amplifies a sense of energy while urging competing elements toward a single, expressive purpose.

Bean, who lives and works in New Jersey, uses a variety of post-firing techniques to embellish his pieces. With stencils, glazes, and acrylic paints, he composes vibrant abstract designs on their surfaces. His vessels have a mesmerizing radiance thanks to the application of gold leaf to their undulating interiors. With an impeccable sense of control, Bean flirts with the potential for visual inebriation, but he holds this tendency in check through the use of exposed, smoky-white earthenware surfaces, which have a rustically calming influence on his vessels.

Bean's work is in the permanent collections of museums around the United States, including the Boston Museum of Fine Arts in Massachusetts and the Smithsonian American Art Museum in Washington, D.C.

“ One of my concerns is the idea of control, which, in my case, takes the form of refusing to let the fire have the last word. Much of the work on my pieces is done after they’re fired.”

ROSS

Duncan Ross

EMPLOYING A PROCESS OF FIRING that could be called painterly due to its effects of seemingly liquid articulation, British ceramist Duncan Ross instills nuances of depth and subtle tonal gradations in the walls of his vessels. Like oil seeping into leather, the smoke from the firing process produces a richness that contrasts with the translucency of Ross's surfaces, which accept shades from gray to dense black.

Through the use of terra sigillata, Ross has developed a tonal range that allows him to create slipped, burnished pieces with hues that are remarkable for their warmth and variety. Some of his vessels feature linear patterns

borrowed from textiles. These patterns create rhythms of energy in each piece and are more suggestive of living substance than fired clay. Nothing in Ross's work appears forced, although his progressive exploration of the relationship between surface and form is carried out with the utmost precision and an unrelenting sense of perfection.

Ross exhibits widely in the United Kingdom and abroad. His work is held in collections around the world, including the Victoria and Albert Museum in London.

Patrick Dougherty

TAKING THE METAPHORS OF VESSEL AS CANVAS and plate as mirror to heart, Patrick Dougherty creates intricately detailed pieces that draw on painting styles of the past. These styles—an introspective variety rooted in the self-portraiture of Rembrandt and a surreal approach that was the chosen

mode of Giuseppe Arcimboldo and Salvador Dali—have merged in Dougherty's work to produce pieces that display a unique harmony of pattern, color, and form.

Dougherty seeks to grasp the fleeting figures of his inner vision and project them onto surfaces through precise lines of geometry: spirals, arcs, and rectangles receding in an exaggerated linear perspective that disorients the eye and carries the viewer's thoughts toward a dreamlike sphere of ephemeral impressions. The mosaic dots on the rims of his plates and the necks of his baluster jars inject a vibrant spectrum of colors that are deepened and solemnized in tone by the dark grounds on which they are painstakingly painted. Viewing his work as a means of synthesizing the physical, emotional, and spiritual aspects of human existence, Dougherty gives his pieces an intuitive, non-rational quality.

Based in Kentucky, Dougherty has won numerous awards and participated in exhibitions throughout the United States.

THACKER

Christine Thacker

EXHIBITING A SOLID SELF-SUFFICIENCY and a scaled-back aesthetic, the coil-built vessels and sculptural objects made by New Zealand ceramist Christine Thacker have an appealing simplicity. Thacker works with a restricted range of materials, confining herself to a narrow selection of transparent glazes, and she uses simple construction methods. From early figural works—pieces in which the general contours of the human torso are contained within broad, vaguely bottle-shaped masses, with faces, arms, and hands flattened into the ceramic surfaces—to recent, roughly fashioned vessels, Thacker has long taken a reductive approach to ceramics.

This minimalism is as much medieval as it is modern in origin. Some of Thacker's pieces openly recall the vertical profiles, prominent feet, and slightly uneven surfaces of the sturdy Rhenish vessels of the Middle Ages. Her slab works express a similar hardness despite the impression of corrosion or crumbling produced by a combination of ceramic pigments, oxides, and glazes. Unembellished and demonstrating a weathered beauty, Thacker's works are structurally integrated, with no elements that seem superfluous or distracting. Thacker has exhibited widely in New Zealand, Australia, Japan, England, Germany, and Hungary.

TAKAYAMA-OGAWA

Joan Takayama-Ogawa

INSPIRATION FROM JAPANESE DECORATIVE ART permeates the distinctive teapots and sculptural pieces created by Joan Takayama-Ogawa. Her historical influences include ceramics from Japan's Edo period, an era of high craftsmanship marked by technical exquisiteness and aesthetic refinement, especially in lacquerware. The Edo influence is evident in works by Takayama-Ogawa that feature gleaming gold set against glossy jet surfaces or floral motifs depicted in shallow, mysteriously ambiguous spaces.

Despite her historical inspirations, Takayama-Ogawa can't be considered a traditionalist, because her influences usually serve as starting points for the creative explorations of possibilities. Her investigations frequently yield whimsical forms and unexpected methods of developing decorative elements. A sense of playfulness and an appreciation for the absurd often characterize her work, which she uses at times as a vehicle to express an ironic view of American culture. A California native, Takayama-Ogawa has pieces in the permanent collections of the Smithsonian American Art Museum in Washington, D. C., and the Los Angeles County Museum of Art. She teaches ceramics at Otis College of Art and Design in Los Angeles, California.

“ Earthenware has a memory. If we are remembered as a civilized society, it will be because of the art we leave behind.”

MILETTE

Richard Milette

A LEADING FIGURE AMONG A GROUP OF SCULPTORS who grapple with the concept of “ceramicness” in an abstract sense, Richard Milette creates wonderfully provocative works that overturn standard definitions of the vessel. Engaging in an anti-archaeological process that dispels rather than embraces function—that undermines the utility of conventional forms such as amphorae, lekythoi, and teapots and negates their roles as documents of cultural development—Milette pieces together fragments of ceramics history in his work using a multi-layered, multi-referential aesthetic.

Most of the shapes and surfaces that Milette uses are stereotypical or historical, and he views his own pieces as imitations rather than reproductions. The shard as a fracturing, disruptive element recurs in his work as a deliberate obstacle to narrative or any explanatory content that might express meaning in a logical sequence of cause and effect. Hierarchies of form (sculpture as high art and ceramics as a minor art) and of medium (refined porcelain and lowly earthenware) are other targets of deliberate dismantlement in his work. Milette skillfully juggles many different eras and genres from the history of his medium in order to accentuate the “ceramicness” of his objects.

Based in Montreal, Milette has work in public collections in Canada, Europe, and the United States.

“I believe that art is about concepts, not materials or processes. I deliberately use a ceramic idiom to support this point of view.”

MORETTI

Marino Moretti

VIBRANT PARADES OF WHIMSICAL IMAGERY conjured from Gothic bestiaries, Persian bowls, Hispano-Moresque chargers, and the canvases of modern abstract figural painters march over the surfaces of Marino Moretti's colorful ceramics. Moretti, who grew up amid a family collection of painted Italian medieval wares, is fully conversant with conventional potting and decorating techniques. Although his earliest efforts were directed at imitation, his vocabulary of lavishly dressed kings and queens and double-headed harpies and dragons has become personalized over the years and now forms the heart of an art that exclusively follows the dictates of his own imagination.

Moretti's iconographic repertory only occasionally turns to geometric and floral elements. His techniques and glazes vary from piece to piece, and his colors range from primary and bold to neutral and monochromatic. Ever attentive to the balance of motif and form, he instills his work with a special aesthetic energy. Moretti's studio and gallery are located in a ninth-century castle on top of a mountain in Viceno, Italy. His work is in many private collections, and he has participated in exhibitions in Italy, Australia, Canada, and the United States.

HUEY

Linda Huey

VIEWING CLAY AS BOTH AN ENTRYWAY into the natural world and a tool for exploring its parameters, Linda Huey produces work that hums with the energy of the great outdoors. Huey, who is based in New York and Massachusetts, uses pottery as a means of investigating natural processes and expressing environmental concerns. Seeds are one of the main inspirations behind her poignant cycle-of-life compositions. Her palette is drawn directly from nature. In some pieces, rust or ochre-hued forms, hollow like decaying husks, create a melancholy effect that brings to mind lost potential. This somber mood is balanced out by optimistic works that feature rotund shapes swelling with life in vibrant purples and deep greens.

Although Huey's forms are monumental and boldly modeled, her surfaces can be delicate, characterized by powdery featherings of color, dry crusts of craquelure glaze, or shallow imprinted textures. Some pieces hint at mankind's negative impact on the natural world. No matter what their messages may be, Huey's complex renderings of buds, blossoms, and leaves serve as wonderful reminders of nature's richness.

Huey's work has been featured in exhibitions around the world. She has served as guest instructor at numerous institutions, including Harvard University and the Rhode Island School of Design.

KOBLITZ

Karen Koblitz

EXPLOITING THE LAVISH POTENTIAL OF PATTERN AND ORNAMENT in her vessels and tiled relief sculptures, Karen Koblitz creates pieces that allude to the intricately interwoven, richly layered history of glazed ceramics in Asia, the Middle East, and Europe. Each of her densely embellished pieces juxtaposes a variety of designs from a certain era or culture. The confluence of Eastern and Western societies is celebrated in some of her work, while other pieces wed pop culture with high-end decorative arts.

Drawing inspiration from sources as diverse as Turkish Iznik wares, Italian Renaissance majolica dishes, Qing dynasty enameled ginger jars, and vibrantly colored cartoon characters, Koblitz pursues an integrated aesthetic that probes the hybrid past of ceramic decorative conventions, even as it speaks the convoluted language of contemporary globalization. Her vocabulary draws its distinctive flavor from impurity. Like a concoction of

diverse elements that forms an intricate but stable compound, her compositions coax a wonderfully unexpected harmony from the multiple discordant strings of decorative style.

Koblitz, who is the director of the ceramics area at the University of Southern California in Los Angeles, has work in galleries around the world.

ROMERO

Diego Romero

COMBINING ANCIENT STYLES OF POTTERY DECORATION with modern symbols of America's consumer-oriented society, Diego Romero creates vessels and bowls that are cultural hybrids. He draws on the ceramic traditions of the Anasazi and Mimbres peoples—both native to New Mexico, the state he calls home. Romero makes masterful, slip-painted compositions that blend a time-honored vision with the slickly anonymous traits of contemporary graphic design.

Prompted by reflection on the differences between his upbringing in Berkeley, California, and a later association with his paternal roots in Cochiti, New Mexico, the content of Romero's works is subtly enhanced by the ambiguity of his style. Representations of golfers, fast-food hamburgers, and cell phones in Pueblo format seem to carry ancestral traditions uneasily into the present, while comic-book renditions of dastardly conquistadores project contemporary conventions of representation onto the past. The precisely designed narratives that unfold across his pieces reveal Romero's ties to painters such as Pablo Picasso and Keith Haring. Mixing diverse influences, he has created a style all his own.

Romero is represented by galleries in New York City and Santa Fe, New Mexico, including the Robert Nichols Gallery.

WALKER

Holly Walker

THE IMMEDIACY OF EARTHENWARE CLAY—both its at-hand nature as a common material in the environment and its hands-on quality as a medium—holds a special appeal for Vermont ceramist Holly Walker. Her penchant for the directness of touch, which makes her a lover of cooking and gardening, is

recorded in her material on the most basic of levels. The impressions of

fingers, left by the action of pinching the clay into shape, create shallow fields of shadow on the walls of her vessels and accentuate the expressive unevenness of the layers of slips and multiple glazes that blanket the forms.

Walker is a modeler, to be sure, but the nuances of color and tone that are integral to her jars, trays, and cups reflect a painter's sensibility. She often adds bold yet delicate designs to her pieces, approaching the surface of a pot as a painter would. Playful, graceful, and simple, her abstracted, organic images have an underlying sense of balance and geometry.

Walker has exhibited and taught workshops nationally and served as visiting artist at numerous universities throughout the United States.

MUYS

Herman Muys

CONSTRUCTING MONUMENTS THAT, EVEN AS they rise, seem to flake and crumble in melancholy commentary on the ultimate emptiness of power and prestige, Belgian sculptor Herman Muys uses his work to express an existentialist perspective on human aspirations. He builds his figures through an additive process of pressing together thin slabs of clay, defying solidity as a permanent state and instilling a merciless leanness in the mummified flesh that he shapes.

Muys' early sculptures are imaginary creatures that bring to mind the fantastical works of Hieronymus Bosch and Pieter Bruegel the Elder. These creatures have since evolved into more realistic figures, which are represented in a fragile yet strong manner and which Muys infuses with a sense of physical energy and alertness. Attaching only minor importance to technique as long as the figures in their raw concreteness and smudgy tonality create the desired effect, Muys can be said to begin and end his creative process by avoiding conventions and holding certainty at bay.

Muys lives in Antwerp, Belgium, with his wife, sculptor Monique Muylaert. He exhibits regularly throughout Europe.

WALGATE

Wendy Walgate

WHETHER RESTRICTING HERSELF TO VARIATIONS within a single hue or conjuring the entire range of the visible spectrum, Canadian ceramist Wendy Walgate uses colors in ways that evoke a child's sensibilities and bring to mind the color-saturated world of her Ukrainian ancestors. Walgate achieves a range of brilliant surface hues by using both commercial and studio-mixed glazes. Her teeming assemblages of exuberantly colored ceramic figures serve as a comment on modern-day materialism and the acquisitive instinct that lies behind it.

Walgate's sculptures operate as units in a process of organization that is comparable to the composing of a mosaic, but her process exceeds mere design. While each element—generally a molded animal with the plump contours and cloyingly sentimental features of a child's toy—might conceivably, and less potently, stand alone, its integration into the larger composition is an act of metamorphosis, a transformation that makes it more than a piece of hobby-shop kitsch, elevating it to an uncommon level of art. Subverting the tradition of the decorative figurine, Walgate creates pieces that charm and challenge viewers.

Walgate has exhibited throughout the United States and Canada and taught at the Ontario College of Art and Design in Toronto.

“I’ve abandoned the hands-on manipulation of clay and now exclusively slip cast commercially available plaster molds. Consciously removing the elements of touch and uniqueness that are thought to be essential in craftwork has been a controversial move for me. But it was a direction that I needed to take.”

KLODA

Phyllis Kloda

ADOPTING THE POSTMODERN CREDO that creativity consists not in what you invent but in what you discover and how you employ it, Phyllis Kloda describes herself as a curator of objects whose primary task involves finding singular forms for incorporation into complex and often narrative-driven compositions. Her molded earthenware parts reflect origins in objects as diverse as electronic gadgets, vegetables, and dog toys. They're brought together in assemblages that sometimes serve as a principal means of expression and in other cases function as intricate frames for painted panels that spin narratives between two- and three-dimensional imagery.

An aspiring painter before she started working with clay, Kloda uses the brush to produce fresco-like imagery and to tint molded forms such as carrots and cabbage with the convincing hues of a trompe l'oeil naturalism. Kloda's compositions—small, descriptive environments that invite viewers to explore and interpret—are the works of an artist who clearly delights in her chosen materials and the creative process. Kloda teaches at the State University of New York at Brockport.

COPELAND

Alexandra Copeland

INSPIRED BY BLUE-AND-WHITE CHINESE PORCELAINS and Islamic and Italian tin-glazed wares, all of which contribute stylistic elements to her motifs and figure into her imagery, Alexandra Copeland produces vibrant works that reflect a keen awareness of ceramics history. With her antiquarian impulse, she embraces continuity—a lineage in decorated vessels stretching back across the centuries—but the subjects of her images, most importantly the memento mori of cut flowers spilling from mouths of painted vessels, express a contrary reflection on the brevity of individual life.

From this conflicting combination of longevity and ephemerality, Copeland forges a unique style of melancholy beauty. Her strong sense of color and design produces lavish surfaces, and her linear drawings give each of her bowls and platters a wonderful lyricism. A collector of textiles from central Asia, Copeland travels frequently to Afghanistan, and her work reflects her love of fabric in its complexity and richness of pattern.

Copeland, who lives in Australia, exhibits regularly around the world. Her work is in numerous public collections, including the National Museum of Australia in Canberra and the Museo Communale in Deruta, Italy.

FOULEM

Léopold L. Foulem

CREATING PIECES THAT TRANSCEND the category of ceramics even as they draw upon its rich history, Canadian artist Léopold Foulem takes a conceptual approach to his art. Foulem often borrows stylized utilitarian elements from ceramics history—the volute handles of ancient Greek kraters, or the stirrup-spouts of pre-Columbian Peruvian vessels—and merges these iconic forms with hints of Qing dynasty blue-and-white or mille-fleur patterns to form his own distinctive combinations. These provocative pieces are meant to be viewed in the abstract, as representations rather than functional objects.

Foulem produces works that engage a recognizable tradition of utilitarian ceramics while at the same time deliberately canceling out the properties of utility. His teapots and vessels evidence his lively sense of humor and flair for the ironic. Employing decals and found objects in works of complex conception, Foulem blends pop culture with serious art to create an aesthetic all his own. One of the first Canadian ceramists to have his work collected by the Victoria and Albert Museum in London, England, Foulem teaches in Montreal and exhibits regularly around the world.

auto-referential ceramic images that
transform the nature of the objects
into abstractions.”

ARBUCKLE

Linda Arbuckle

THE MASTERFUL MAJOLICA VESSELS created by Linda Arbuckle extend a generous invitation to viewers—an invitation to indulge not only in the opulent visual delights of surfaces enlivened by fluid lines and rich, warm hues but also in what might be called an exuberance of use. With a resounding validation of the here and now, Arbuckle's vessels are designed to serve utilitarian ends in ways that fundamentally enrich the domestic experience.

Arbuckle has a quick, fresh painting style, and her platters and bowls brim with vitality even as they hint at life's impermanence. She uses plants to symbolize the energy and indulgence of flowering and the fragility of human existence. The autumnal colors of her palette and the succulent fruits they present conjure the harvest, both in a literal sense and as a metaphor for the accumulation of the rewards of life-long labor.

The brushwork and color made possible with majolica, combined with the ordinariness of terra cotta, allow Arbuckle to express her sense of daily life as an occasion for celebration.

Arbuckle teaches at the University of Florida in Gainesville. She has participated in exhibits around the world and is an elected member of the International Academy of Ceramics.

HUGHES

Woody Hughes

VIEWING HIS VESSELS AS FULCRUMS for a balance of utility and gestural exploration, Woody Hughes unlocks the sculpturally expressive possibilities of pitchers, bowls, and lidded jars without severing his ties to the tradition of functional pottery. Hints of historical ceramics surface now and again in his work, through references to the bill-like spouts of late Minoan jugs or ancient Iranian vessels. Hughes weds them with a personally distinctive vocabulary of bold orange earthenware grounds, smoothly painted wave or meandering vine patterns, rapidly incised lines, and accents of green or amber glaze.

Fluid throwing provides the foundation for Hughes' vessels, which he instills with a quiet geometry. Taking advantage of the freedom that terra cotta allows, he creates a variety of surfaces for each of his forms—surfaces that he uses to define the individual elements of a piece. Through a method involving cycles of contemplation and response, Hughes engages in a dialogue with his evolving forms and records this conversational process in the material of his work.

Hughes lives in Maine and exhibits regularly in galleries and museums across the United States. He has taught at Dowling College in Oakdale, New York, and Parsons School of Design in New York City, as well as at workshops throughout the world.

“ My work was originally inspired by historical references, but recently it has taken on its own order, a formal structure more unique and in response to itself. The pieces borrow trends and solutions from one another, yet improvisation can take place at any point in the creative cycle.”

AYDLETT

Chuck Aydlett

CULTIVATING A DELIBERATELY AWKWARD FIGURAL STYLE that blends the terseness of cartoon drawing with the obsessive musculature found in early Renaissance nudes, Chuck Aydlett uses the human body in his work to signal psychological states of unease. The application of his naive style to dreamlike hybrids of humans and plants—figures with veins and arteries that convert weirdly to twigs and torsos that metamorphose into strange tangles of branching roots—brings to mind the folk surrealism of Frida Kahlo. The sense of mental tension that's made manifest by Aydlett's drawings of twisted, clumsily positioned human figures is underscored by the exaggerated shapes of the ceramic pieces on which they appear.

Aydlett, who feels strongly about man's need to interact with nature, uses his vessel forms to create narratives about this relationship. He hand builds his functional pots, cups, and plates. His drawings, with their detailed depictions of physical transformation, are executed in a sketch-like manner. Leaving viewers to tap their own reservoirs of experience in order to determine meanings, Aydlett's compositions suggest symbolic narratives but withhold the keys to deciphering them.

Aydlett teaches at Winona State University in Winona, Minnesota, and he has participated in exhibitions throughout the United States.

WARASHINA

Patti Warashina

USING THE HUMAN FORM TO ADDRESS THE PRESSURES of the modern world, Seattle-based ceramist Patti Warashina constructs symbolic figural sculptures—men and women in nonsensical situations, who mirror all humanity in the absurdity of their behavior. Warashina claims as inspirations the small court figures of the Han Dynasty and early Japanese Haniwa figures, as well as Greek and Egyptian caryatids. Her narrow, elongated, hand-built forms recall these traditions while expressing a very modern sensibility.

Whimsical yet completely functional, Warashina's sake sets serve as vehicles for statements on environmental and societal concerns. The commentary Warashina embeds in her work regarding the turmoil of the contemporary world and the folly that has generated it penetrates to the deep roots of psychology. Balancing humor and pathos, eccentricity and naturalism, she constructs monuments to the complexity of human motives. Warashina has exhibited internationally, and her work is in the collections of the American Craft Museum in New York City, the Art Gallery of Western Australia in Perth, Australia, and the Smithsonian American Art Museum in Washington, D.C., as well as many other institutions.

“What intrigues me about making art is that it allows me to work out my personal visual ‘madness’ and solve visual problems. After establishing a problem in a piece, then resolving it, the finished work leads me to other questions, and so on. This keeps the ball rolling.”

Sophie MacCarthy

THICKETS HEAVY WITH SPRING RAINDROPS and fidgety congregations of wrens; human profiles traced in glistening snail trails or scratched in the muddy skim of evaporated puddles; fallen leaves fluttering among cages of dry grasses—the components of Sophie MacCarthy’s distinctive imagery channel the complexity of nature into patterns of lyrical line and planar motifs. MacCarthy, who lives in London, replicates the rich vibrancy of the natural world on the surfaces of her plates, vases, and jugs using a palette of soil and vegetal hues. Exploring the two-dimensional space of a decorative figural style, she creates compositions of line and thinly washed color that bring to mind the late paintings of Raoul Dufy.

To compose designs such as leaves, animals, and fruit, MacCarthy employs slips tinted with stains and oxides in stenciling and wax-resist techniques. She paints directly on the clay and uses transparent layers of slip to achieve a sense of pictorial depth. A sensitivity to balance and randomness—harmony and unpredictability—lends her work a paradoxical earthy refinement.

MacCarthy has exhibited extensively in the United Kingdom, and her work is in the National Art Collection of Great Britain.

SIEBERT

Terry Siebert

ECHOES OF ITALIAN FOLK POTTERY, EARLY DELFT polychrome wares, and English botanical plates enliven Terry Siebert's majolica works with a spirit of the past. Yet the frankness of her execution, the spare flatness of her motifs, and the assertiveness of her oranges, reds, and purples—colors that seem to disengage themselves from the images they compose and achieve freedom as light—are unmistakable signs of a contemporary aesthetic.

Siebert, who is based in Washington, carefully renders images of plants and insects, using glaze in a painterly fashion. But Europe's tradition of great tin-glazed wares has inspired her to express nature's energy, variety, and irregularity by accepting the imperfections of her medium. Pinholes, minor warpage, and other randomly occurring characteristics of majolica serve as parallels to the unpredictable traits of her subject matter: the infinitely varied forms of the natural world. Teeming with life and color, her vases, bowls, and plates have a unique vibrancy.

Siebert studied ceramics at the Rhode Island School of Design, and she has exhibited and taught throughout the United States.

KENDALL

Gail Kendall

STURDY FORMS ROOTED IN ISLAMIC and European tin-glaze traditions from the thirteenth through the eighteenth centuries, the vessels of Gail Kendall bring to mind robust pots accustomed to calloused hands and years of use on cottage sideboards. A casual acceptance of informality in the shifting of glazes and the occasional acquisition of bits of kiln refuse impart geniality to the surfaces of Kendall's works and imply a hearty invocation to touch.

The uniqueness of Kendall's work, however, emerges from her ability to meld this appreciation for the informal with a highly refined sensitivity to decoration. Fish-skin dot patterns, simple floral motifs, and rolled rims that undulate in organic gracefulness serve as natural bridges between the simple utility implicit in her vessels and the potential to spill over into an ornamental opulence—potential that is hinted at by subtle accents of gold luster. Representing a wonderful synthesis of ceramic traditions, Kendall's works strike an artful balance between the decorative and the utilitarian.

Kendall teaches at the University of Nebraska-Lincoln and exhibits regularly throughout the United States.

NAPLES

Lisa Naples

ADOPTING SIMPLE MOTIFS FROM NATURE—a crow, an egg, a sprig of leaves pressed flat yet still green with the stuff of life—Pennsylvania ceramist Lisa Naples creates plates, jugs, and cups that express organic energy. In her work, the sweep of a spout, the curl of a saucer's rim, or the bend of a handle imitate the familiar attitudes of branches and leaves. The colors Naples uses evoke memories of earth and plant life, and the tonal arrangements she creates suggest dappled shadow and sunlight on a forest floor.

Today, Naples creates few strictly functional pieces, a shift brought about by a residency in Australia that gave her time to consider a change of direction. Naples' recent creations, which feature images of eggs as symbols of potential, are markedly introspective. To engage the viewer on an extra level, she incorporates prose poems into

these pieces—texts that contemplate a hidden source of creativity. Naples' ever-evolving body of work reflects her fearlessness when it comes to tapping that hidden source. Her work has been exhibited in galleries throughout the United States, including the Philadelphia Museum of Art and the National Building Museum in Washington, D.C.

“ My work continues to change and move forward—with velocity. There are stories that want to be expressed.”

DIXON

Stephen Dixon

THE INFLUENCE OF SATIRICAL CARTOONS on the work of Stephen Dixon is clearly reflected in the combination of narrative structure and political content that characterizes his densely populated early compositions. In those works, Dixon created diorama-like encrustations of figures that spill over pseudo reliquaries and sarcophagi. Warping the allegories inherent in Western myths and stories, these figures speak the language of 1970s Funk art.

In more recent works, Dixon has flattened most of the pictorial narrative, using incised or printed surface imagery to create an effect of fragments brought into a temporary, layered, and uneasy unity. This layered quality is made literal through the slab construction—irregular like the makeshift walls of a shantytown dwelling—that is characteristic of his recent cylindrical vessels. The impulses behind much of Dixon's work are the political narrative tradition in

ceramics and the allegorical sculptures, paintings, and prints of the late Renaissance. His explorations of these areas have yielded pieces that are rich with symbolism, fresh imagery, and a fierce sense of irony.

Dixon lives in England. His work is featured in numerous collections, including the Museum of Arts and Design in New York City and the Victoria and Albert Museum in London.

DE FAZIO

John de Fazio

THE BUBBLING OF POP AND KITSCH in a psychedelic stew of brightly glazed, mold-made cartoon characters, writhing anatomical parts, and weirdly mutating creatures of uncertain origin produces an ironic sense of style in the sculptures of John de Fazio. His everything-but-the-kitchen-sink compositions are monuments to American excess. Driven by a taste for multiples that dates back to a childhood pastime of molding rubber bugs and a fascination with hybridity first piqued by a plaster cast of the Siamese twins Eng and Chang, de Fazio effervesces with an uncontainable desire to proliferate and conjugate forms.

By linking this roiling energy to the aspects of sensory overload that we experience through television and the Internet, de Fazio unites the personal with the collective. Applying his unconventional aesthetic to traditional forms, including funerary vessels, commemorative plates, and bas-reliefs, he creates compositions that, in their bewildering diversity and garish aggressiveness, are familiar to us all. De Fazio, who lives in California, has used his flair for the idiosyncratic to design sets for the television show *Pee-Wee's Playhouse* and furniture for the offices of MTV. His art has been exhibited at the Venice Biennale and the Museum of Arts and Design in New York City.

WILBUR

Wynne Wilbur

REDUCING RELATIONSHIPS OF LIGHT AND SHADOW to flat washes of pale color and broad comma brushstrokes that are slightly darker in tone, Wynne Wilbur creates majolica imagery that acknowledges both the full, round forms of the fruits that she depicts and the two-dimensional earthenware surfaces upon which these are painted. Wilbur grew up in a household filled with Mexican painted animal figurines and pottery, and they remain among her key inspirations. Her plates, jars, and teapots evoke the warmth and honesty of such pieces.

Like a watercolorist, Wilbur deftly employs the white of the ground to suggest areas of light reflecting from the glossy skins of her apples, pears, and cherries. Encircling these highlights and the areas of filmy color that hint

at the beginnings of pictorial form, she paints curving brackets of distinctive, thin black lines that start in dots and sweep into continuous, uniform, liquid strokes or thin trailings of dashes. These linear borders snap Wilbur's imagery into crisp clarity and decisively separate figure from ground. The idea of the visual embracing the tangible is central to her work.

Wilbur teaches ceramics at Truman State University in Kirksville, Missouri, and exhibits regularly throughout the United States.

“ My first painted work was a cacophony of color. I used every color to excess. It was like opening a bag of a favorite candy and eating the whole thing to the point of sickness instead of savoring each piece. I finally did a series using only neutral shades, and then slowly let colors back into my palette a few at a time.”

SLEE

Richard Slee

LIKE THE GLOSSY FENDER OF A SPORTS CAR, the liquid luster of nail polish, or the translucent perfection of a lacquered guitar, the surfaces of Richard Slee's sculptures are so slick and smooth that viewers automatically want to touch them. Slee, who has taught at the Camberwell College of Arts in London since 1992, thoroughly rejects the "brown-pot" ceramics tradition and embraces instead the vivid attractiveness of sleek industrial wares. Savoring earthenware glaze colors for their brightness and range, he layers glazes to achieve a jewel-like depth of refraction for his bold sculptural pieces.

Slee's works reveal his affection for the kind of decorative objects commonly found in the home and imply that these can provide more than pleasant diversion for the eye. It is not by chance that certain decorative objects become fixtures of the domestic environment, and Slee's works subtly probe the ways in which these objects can embody memory, bolster self-image, and sustain symbolic narratives. References to the decorative, the ornamental, and the symbolic from history and from contemporary culture are embedded in his shiny eclectic pieces. Slee's work is in collections around the world, including the Museum of Modern Art in Kyoto, Japan, and the National Museum in Stockholm, Sweden.

About the Curator

Matthias Ostermann was born in Germany in 1951, and he and his family moved to Canada in 1953. A ceramist from 1974 until his death in 2009, Matthias created work that has been exhibited internationally and can be found in such permanent collections as the Baden-Württembergisches Landesmuseum in Karlsruhe, Germany; the Victoria and Albert Museum in London, England; and the Royal Ontario Museum in Toronto, Canada. He lectured and taught around the globe—in Australia, Germany, Ireland, Brazil, France, the Netherlands, Scandinavia, New Zealand, the United Kingdom, Eastern Europe, and the United States.

Matthias was an elected member of the International Academy of Ceramics in Geneva, Switzerland. He specialized in low-fire tin-glaze techniques for functional domestic wares, sculptures, and architectural wall tiles. He was the author of *The New Maiolica: Contemporary Approaches to Colour and Technique* (1999), *The Ceramic Surface* (2002), and *The Ceramic Narrative* (2005), all published by A&C Black Publishers and the University of Pennsylvania Press.

Matthias passed away in April 2009 during the production of this book.

Acknowledgments

Matthias Ostermann, curator of *Masters: Earthenware*, died on April 19, 2009, at Royal Victoria Hospital in Montreal following a battle with HIV-induced lymphoma. Matthias shaped this book with his selections of master ceramists who work in earthenware. He held in high esteem all the artists he selected for inclusion. We at Lark Books greatly appreciated his professionalism, expertise, and dedication to the book. He helped create a beautiful and diverse collection of artists and their work.

We want to offer our profound thanks to the fine ceramists featured for their participation and assistance. We also are deeply grateful to Glen R. Brown, who wrote the text about the artists, as well as the introduction, and helped us with much of the work of the book.

At Lark Books, Suzanne J.E. Tourtillott championed the idea for the book and launched the project. Beth Sweet and Dawn Dillingham worked closely with the artists and curator in receiving and organizing materials. Editor Julie Hale did her usual wonderful job in helping the different parts of the book come together seamlessly; she was assisted by Susan Kieffer. Shannon Yokeley and Kathy Sheldon helped organize the entire book-production process. The art team of Kristi Pfeffer and Bradley Norris did exquisite design work; their labors—and their constant attention both to the big picture and the details—made the production of the book smooth from the outset. They present this remarkable collection of earthenware in the best possible way. I thank you all.

— *Ray Hemachandra, senior editor*
